

Nature:

Nature, in the broadest sense, is the natural, physical, material world or **universe**. "Nature" can refer to the **phenomena** of the physical world, and also to life in general. The study of nature is a large, if not the only, part of **science**. Although humans are part of nature, human activity is often understood as a separate category from other natural phenomena.

Mountain

A **mountain** is a large **landform** that rises above the surrounding land in a limited area, usually in the form of a peak.

An example of a mountain is:

A **line** representation of a mountain is given below:

If a mountain is assumed to be a cone, then it's volume can be given by the **formula**:

$$\frac{1}{3}\pi r^2$$

We now present a table of the height of highest mountains:

Name of Moutnain	Height of peak (in m)
Mt Everest	8848
K2	8611
Kangchenjunga	8,586
